

Why Do Substructures Leak?

BS8102 2022 Key Updates

This CPD provides designers with the key updates to the significant changes made in the latest revision of BS8102 published in March 2022 which you need to be aware of.

For those who work with NHBC or similar insurers we also have a discussion on the design requirements of NHBC Chapter 5.4

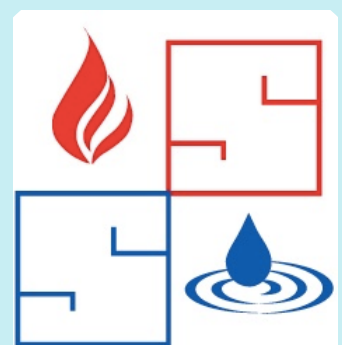

Building owners, insurance companies and structural warranty providers now require a warranty or guarantee with the waterproofing of basement structures.

With the majority of manufactures providing only product warranties we explain how to resolve the issue and provide the client with a comprehensive warranty / guarantee.

With over 20 years experience designing waterproofing solutions for below ground, podium deck and green roofs our presenter, Ian Matheson, will be able to answer all your technical questions and give you an insight on how to prevent failure by getting the design right first time.

Our £10M PI covers design of basement waterproofing systems as well as podiums, green, blue & flat roofs.
